Ending the Death Certificate Paper Chase.

eCedentTM and Forensic Filer Announce Strategic Partnership to
"End the Death Certificate Paper Chase"

eCedent™ and Forensic Filer Announce Strategic Partnership to “End the Death Certificate Paper Chase”

eCedent™, the revolutionary online data service for complete death certificate management, is pleased to announce a new strategic partnership with Forensic Filer. As many professionals in the field are aware, Forensic Filer is a desktop software program, owned by Douglas & Associates, Inc., which provides case management for coroners and medical examiners.

(For more information, visit www.ForensicFiler.com)

“We feel our partnership with Forensic Filer will offer our customers more choices, and the best of both worlds in ending the death certificate paper chase,” said Chuck Conrad, president of eCedent. “Forensic Filer will remain an excellent stand-alone, desktop resource. For those who need an online system that’s available from any computer, and offers many expanded features like electronic signatures and data sharing, eCedent™ gives them that increased convenience and power.”

Among eCedent’s™ main features are its ability to provide coroners, physicians, medical records personnel, and funeral homes with secure, 24/7 online access for creating, managing, electronically signing, and printing death certificates. Users simply log in and enter their data from any computer with an internet connection. Others involved in the case are then able to access that same data, sign electronically, and print the finished certificate when needed.

eCedent™ streamlines communication by sending automatic notifications to physicians, coroners, and funeral homes. The system saves time and money, eliminates repeated phone calls, and ends the need for driving back and forth to sign, pick up, and deliver death certificates.

Coroners will appreciate eCedent’s™ powerful incident management system, which can be accessed on-scene via laptop computer, offering 24/7 access to all investigation data, forms, reports, and photos. The system even offers an encrypted e-commerce module that lets third-party investigators purchase coroner reports and photos via online credit card transactions. Payments are made up-front, and data can then be downloaded for “instant” delivery.

“We’ve done our homework in designing eCedent™, drawing from many years of experience in the field,” Conrad said. “We’ve also had in-depth focus groups with professionals from across the industry. We understand what they need, and we’re looking forward to revolutionizing how death certificates are handled.”

A Beta Test of electronic physician signatures is being planned for one county in Pennsylvania in early 2008.

“We’re very pleased with our cooperative relationship with Douglas & Associates, Inc.,” Conrad said. “We know how valuable Forensic Filer is to those who use the program, so to form a partnership with a company of this caliber is exactly what we were looking to do. With both Forensic Filer and eCedent™ to offer, we feel we’re giving our customers the most excellent tools available – and the ability to select the program that’s best for them.”
